

Simple Neuronal Network Robot Bot run on a Arduino

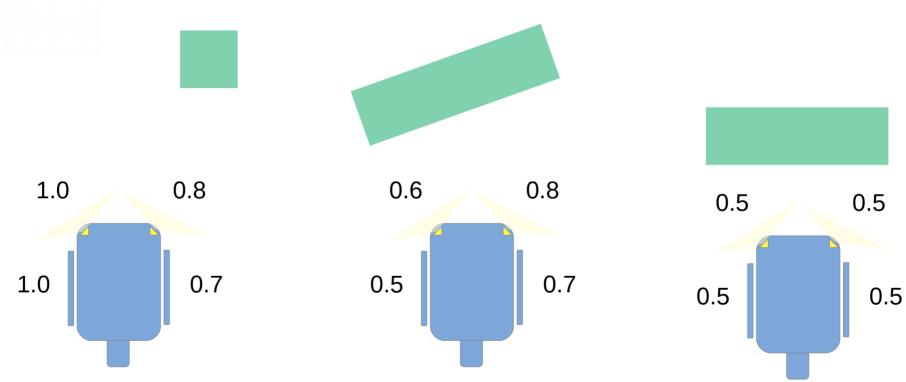

Follower Logic 1/2

Follower Logic 2/2

Follower Logic Target / Formula

Defined Target:

Distance	Speed
1.0	1.0
0.8	0.7
0.5	0.4
0.3	0

Formula Calculation:

Speed = (Distance -0.3) /0.7

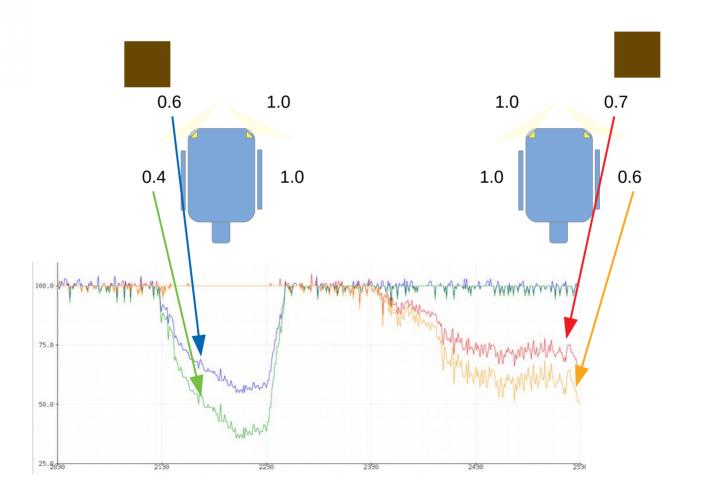

Distance	Speed
1.00	1.00
0.80	0.71
0.50	0.29
0.30	0.00

```

Follower Testrun / Formula

Follower Logic Target / Neuronal Network

Defined Target (same):

Distance	Speed
1.0	1.0
0.8	0.7
0.5	0.4
0.3	0

Follower Logic Target / Neuronal Network

Manual Training Data

Dista	ance	Motor		Detail	
Left	Right	Left	Right	Detail	
1.00	1.00	1.00	1.00	No Obstaceles	
0.80	0.80	0.70	0.70	Obstacle in the middle but far	
0.50	1.00	0.40	1.00	Obstacle at the left	
1.00	0.50	1.00	0.40	Obstacle at the right	
0.30	0.30	0.10	0.10	Obstacle in the middle nearby	
0.00	0.00	0.00	0.00	Obstacle in the middle very close	

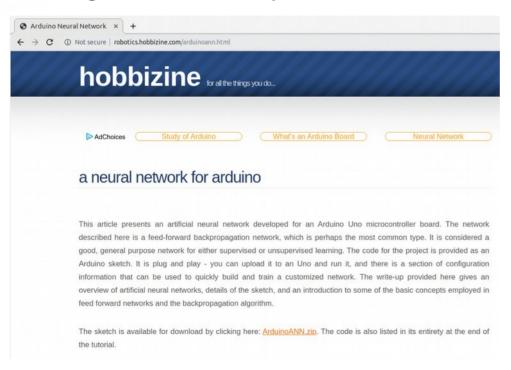

Neuronal Network Setup

- Input Nodes = 2
- Output Nodes = 2
- Number of Trainings records = 6
- Hidden Nodes = 5
- Learning Rate = 0.3
- Momentum = 0.9

Arduino Implementation

Coding based on http://robotics.hobbizine.com/arduinoann.html

Neuronal Network Visualization 1/2

three-layer feed-forward Network algorithm: Gradient descent

Learning Rate: 0.3

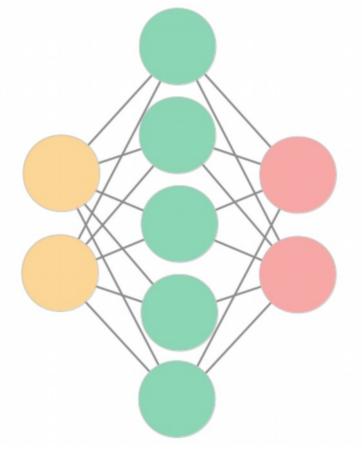

Adjusts how much of the error is actually backpropagated.

Momentum: 0.9

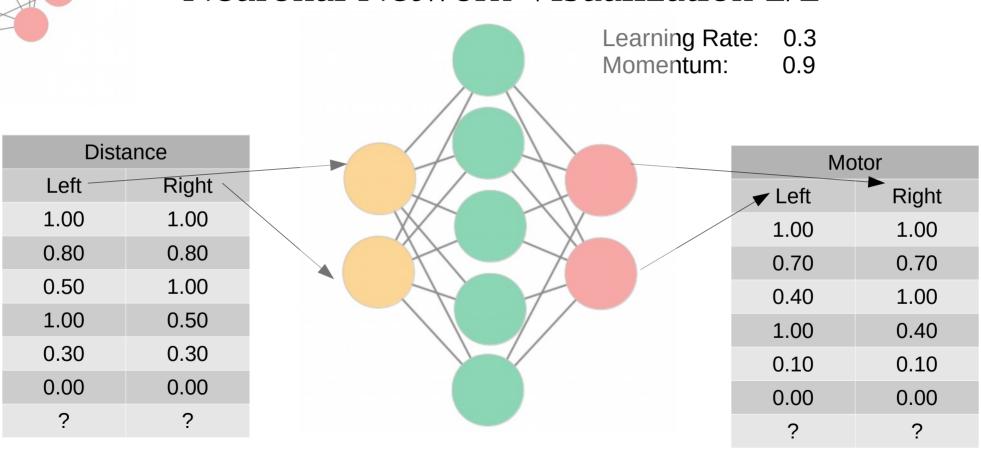

Adjusts how much the results of the previous iteration affect the current iteration.

Minimal Success: 0.02

The threshold for error at which the network will be said to have solved the training set.

Follower Testrun / Neuronal Network

Neuronal Network change Functionality: "Evasion"

Motor speed definition:

1.0 => Full forward

0.5 => stop

0.0 => Full backwards

Dist	ance	Motor		Data!!
Left	Right	Left	Right	Detail
1.00	1.00	1.00	1.00	No Obstaceles => full forward
0.80	0.80	0.90	0.90	Obstacle in the middle but far => slow down
0.40	1.00	0.70	0.20	Obstacle at the left => Right turn
1.00	0.40	0.20	0.70	Obstacle at the right => Left turn
0.30	0.30	0.10	0.10	Obstacle in the middle nearby => backwards
0.00	0.00	0.00	0.00	Obstacle in the middle very close => full backwards

Challenges

- Build samples with some kind of learing drive
- Use this Neuronal Network for balancing with a accelerator
- Try other functionality

Summarize

- A simple Neuronal Network works on Arduino
- No need of a huge set of testdata
- Change of "Functionality" easy: Follower => Evasion
